

# TERRY'S LEASE MAINTENANCE

*Your all season Maintenance company*

## Product/Service Information

- Vegetation management
  - Herbicide application and Herbicides
  - Mechanical removal of vegetation (mowing, chain sawing and gas powered weed trimmers)
- Rental Equipment
  - light towers, generators and other small equipment
- Snow and Ice Removal
  - Snow Plow trucks and sanding units
  - Skid steers
  - Tractors

Est: 1995

TLM started with one spray truck and two quads and has since grown (in large part due to our dedicated customers), into an energetic and aspiring company with over ten spray trucks and two off road Ranger spray units

TLM strives to please the Energy Companies, Landowners, and Municipalities in a working partnership to eliminate and reduce vegetation growth in undesired areas.

- In addition to chemical application, TLM also maintains the vegetation with tractors and brush clearing equipment.

### What is the TLM advantage?

- \* Experienced: TLM employs experienced and professional staff, local to your area. Personnel have been extensively trained and are capable to perform all spray jobs.
- \* The Partnership Approach: Our experienced team will work with you to solve all of your maintenance needs.
- \* Locally Owned and Operated: TLM attributes their growth to the care of their operators in the field and their community presence outside of it. Terry's supports local initiatives and believes in building a better community.

# TERRY'S LEASE MAINTENANCE

*Your all season Maintenance company*

TLM strives to meet and exceed the expectation and regulations laid out for us. We pride ourselves in quality and dedication to delivering the best results for our customers

## Benefits of Our Vegetation Control Program

Vegetation controls are necessary for the industry in order to maintain structural integrity for building and pads on site, as well as reducing the risk of damage done by fire. Some peripheral benefits of vegetation management are; cleaner, better looking sites, healthier surrounding environment by removing the noxious weeds. The application of herbicides allows the TLM team to eradicate vegetation in one application, where as often it requires more than one mechanical intervention. Herbicides also allow us to remove the weed without spreading seeds and continuing the propagation of that plant.

TLM is committed to providing the best possible service for our customers and the environment. Due to plants ever growing resistance to herbicides, TLM is on the forefront of resistance prevention practices:

- Minimizing resistance starts with **prevention**: TLM ensures that all equipment is meticulously cleaned prior to entering new fields in order to stop the propagation of weeds.
- TLM also employs an **integrated weed management technique**: using herbicides as only part of the control, pairing them with mechanical controls in order to best combat the vegetation.
- **Tank mixes**: the combination of chemicals that target the same plant through a different mode of action delays resistance.

- **Field history and Information Collection**: Records of previous application methods and chemicals used allows us to evaluate the best course of action and manage the vegetation effectively.
- **Monitor results**: It is important to gauge the effect of herbicide application in order to become more effective in the future and to produce the best results for our customers.
